SUMMARY

Information Technology student at Ho Chi Minh City University of Technology looking for an internship in Backend Development. Familiar with C# and ASP.NET Core through developing personal projects such as an AI document platform and a management system. Hardworking and eager to learn from experienced engineers to improve my coding skills and understanding of backend architecture.

EDUCATION

- **Ho Chi Minh City University of Technology** Ho Chi Minh City, Vietnam
Bachelor of Engineering in Information Technology Sep 2022 – Present

SKILLS

- **Languages:** C#, JavaScript, SQL, HTML, CSS
- **Frameworks & Libraries:** ASP.NET Core (Web API, MVC), React, EF Core, LINQ
- **Database & Caching:** SQL Server, PostgreSQL, Redis
- **Architecture & Design:** RESTful APIs, Clean Architecture, SOLID, OOP, Repository, CQRS, Mediator
- **DevOps & Cloud:** Docker, Nginx, AWS
- **Tools & Testing:** Git, Postman, Swagger, Unit Testing
- **AI-Assisted Development:** Antigravity, Codex, OpenCode CLI
- **Operating Systems:** Linux (Ubuntu), Windows

PROJECTS

- **DocuMind – AI Document Q&A Platform** 11/2025 – 01/2026
FullStack Developer *Project scale: Personnal research*
Description: Built an AI-powered platform for automated knowledge extraction. Used Gemini LLM and RAG architecture to enable natural language Q&A over documents of **100+ pages**.
 - **Clean Architecture:** Applied Clean Architecture to decouple domain logic from infrastructure, enhancing system testability and long-term maintainability.
 - **Performance Optimization:** Leveraged Background Job Processing (Hangfire) for PDF parsing and embedding, achieving a **96% reduction** in response time (from **5s down to under 200ms**).
 - **RAG Implementation:** Built a Semantic Search system using chunking, Qdrant vector storage, and AI embeddings, ensuring high-accuracy data retrieval with low latency.
 - **Cloud Deployment:** Deployed the system on AWS EC2 using Docker with Nginx as a reverse proxy for secure and efficient request handling.**GitHub:** github.com/thanh2323/DocuMind-AI
Web: docu-mind-ai-eight.vercel.app
- **Coffee Business Management System** 09/2025 – 11/2025
Back-End Developer *Project scale: practical application*
Description: Developed a multi-tenant SaaS platform for coffee shop chains, featuring QR-based orders, real-time kitchen tracking, and centralized branch management.
 - **Multi-tenant Architecture:** Implemented data isolation using multi-tenant design, combined with JWT and Policy-based access control for secure branch-aware authorization.
 - **Performance & Scalability:** Utilized Redis for managing temporary orders, improving system responsiveness and reducing primary database load during peak hours.
 - **Real-time & Payments:** Integrated SignalR for instant order updates and VNPay for secure online payments, streamlining the table-side ordering experience.**GitHub:** github.com/thanh2323/Coffee-Business-Management-System
